Product Description

Pharmaceutical Grade Budesonid CAS 51333-22-3 Budesonid Powder Raw Material

Budesonide is a corticosteroid medication that is commonly used in the treatment of various inflammatory conditions. It belongs to a class of drugs known as glucocorticoids, which work by reducing inflammation and suppressing the immune system.

Budesonide is available in different forms, including oral capsules, inhalers, nasal sprays, and rectal foam or enemas. The specific form and dosage of budesonide will depend on the condition being treated.

In asthma management, budesonide inhalers are often prescribed to help control and prevent asthma symptoms by reducing airway inflammation. When used regularly, budesonide inhalers can help improve lung function and reduce the frequency and severity of asthma attacks.

For individuals with inflammatory bowel disease (IBD), such as Crohn's disease or ulcerative colitis, budesonide may be prescribed in oral or rectal forms. It works by targeting inflammation in the digestive system, helping to relieve symptoms such as abdominal pain, diarrhea, and rectal bleeding.

It is important to follow the prescribed dosage and usage instructions provided by your healthcare provider when taking budesonide. If you have any concerns or questions about the medication, it is best to consult with your doctor or pharmacist.
